

L5000 SERIES IMAGING SOLUTIONS

PROTECT YOUR PRINTER INVESTMENT

Printronix LaserLine printer systems require supplies that meet exacting specifications and full operational requirements. LaserLine and all Genuine Printronix supplies are designed and manufactured to provide maximum print quality and cost effective operation, resulting in high reliability, repeatable quality and reduced cost of operation.

THE RIGHT IMAGING SOLUTIONS FOR YOUR APPLICATIONS

Printronix LaserLine L5000 Series laser printers are specifically built for high-speed printing in industrial distribution centers, service bureaus and ERP environments. These printers combine flash fusion technology with continuous form printing to produce high-resolution forms as well as printing on a variety of other media, such as bar code labels, plastic cards, pressure sensitive labels and synthetics. Printronix flash fusion system eliminates heat and pressure, resulting in outstanding print quality.

However, print quality of this flash fusion system is only as good as the supplies used within the printer. That is why Printronix invests heavily in the research, development and testing of all LaserLine supplies. Printronix ensures that the supplies below meet the full operational requirements of LaserLine printers.

Toner: It's a critical component of your laser printing system. Everything on the page image depends on the quality of the toner.

Photoreceptor Drum: Precisely transfers toner to the page.

Developer: Transfers toner to the photoreceptor drum.

Developer Unit: Provides precise metering of toner.

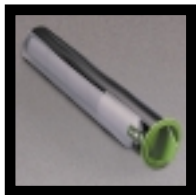

L5000 SERIES PRINTER APPLICATIONS

Excellent Print Quality on a Variety of Media

- Labels for mailing and publishing
- Drum labels for chemicals
- Plastic membership cards
- Apparel shipping labels and hang tags
- Grocery store shelf labels
- Compliance labels for major appliances
- Customer statements and bills
- Automobile window stickers
- Medical laboratory bar codes
- Tyvek law labels
